PREFACE.

THE present Edition of the Society's Official Catalogue follows the lines of the 1906 Edition, which was compiled to meet the requirements of Amateur Rose growers generally, by giving in a convenient form a list of the more reliable varieties now in cultivation, together with a brief description of each, and the purposes for which it is more particularly adapted.

Since the last Edition was issued many new Roses have been introduced. A selection from these has been made and at the same time some of the older varieties have been eliminated. In addition, the whole Catalogue has been carefully revised in order that the present Edition might be brought up to date and rendered more useful to the Society's members generally.

The selections for various purposes at the end of the book have also been carefully revised, and some of the best of the newer varieties introduced into them.

With a view to the improvement of future Editions of this Catalogue the Committee will welcome any suggestions that may be sent to the Honorary Secretary for that purpose.

THE NATIONAL ROSE SOCIETY'S OFFICIAL CATALOGUE OF ROSES.

INTRODUCTORY REMARKS.

A FEW explanations may be advisable as to the terms employed in the descriptions of the different varieties included in this Catalogue. In the first place, after the name of each Rose is given (1) the class to which it belongs; (2) the raiser's or introducer's name and the date of introduction; (3) the colour of the flower; (4) the character of the growth, whether vigorous, moderate, or otherwise; (5) the purposes for which it is best suited; (6) general remarks, which are printed in italics.

1.—The Class to which it belongs:

The following abbreviations are used:—Ayr.—*Ayrshire*; B.—*Bourbon*; C.—*China*; Cl. poly. pom.—*Climbing polyantha pompon*; D.—*Damask*; H.B.—*Hybrid Bourbon*; H.C.—*Hybrid China*; H.N.—*Hybrid Noisette*; H.P.—*Hybrid Perpetual*; H.T.—*Hybrid Tea*; Min. Prov.—*Miniature Provence*; mult. scan.—*multiflora scandens (climbing polyantha)*; N.—*Noisette*; poly. pom.—*polyantha pompon*; Prov.—*Provence*; rug.—*rugosa*; S. Briar—*Sweet Briar*; T.—*Tea*; wich.—*wichuraiana*.

Single-flowered Roses.

By "single-flowered" is meant a Rose having only one row of petals, by "semi-single" two rows of petals, and by "semi-double" more than two rows of petals, but not altogether full.

4.—The Character of the Growth :

The terms adopted range from weak to very rampant growth and are arranged as follows : Weak, moderate, moderately vigorous, robust, vigorous, and very vigorous. Where the growth is sturdy but short it is described as "robust." In the case of climbing Roses those suitable for a dwarf pillar are described as "semi-climbers;" those suitable for a tall pillar or pergola as "very vigorous climbers."

It must be borne in mind that these terms are used in relation to the class to which the Rose belongs. For instance, a Tea Rose may rightly be described as vigorous, whereas the same habit in a Hybrid Perpetual or Hybrid Tea would be described as moderately vigorous.

5.—The purposes for which the Rose is best suited :

An Exhibitor's Rose.—By this is meant a variety which is of too poor growth, or is otherwise unsuited, for general garden cultivation, although in the hands of an experienced exhibitor it may be made to produce fine exhibition blooms.

Arch.—That it is suitable for growing over an arch.

Bedding.—That it is a good variety for massing together in a single bed.

Bush.—That when planted by itself and allowed to develop it makes a bold and shapely bush.

Button-hole.—That it is suitable for a button-hole.

Creeping.—That it is well adapted for trailing over a bank.

Edging.—That it makes an excellent edging to a Rose bed or other border.

Exhibition.—That its blooms are sufficiently large, full and well formed to allow of their being shown singly at Rose Shows.

Garden.—That the variety is recommended for general garden cultivation.

Hedge.—That it is well suited for making a hedge.

Pergola.—That it is well adapted for training over a pergola.

Pillar.—That it is excellent for training up posts or pillars of varying height.

Pot.—That it is well suited for growing under glass, either in pots or planted out.

Screen.—That it is suitable for training up trellis work or other framework used as a screen.

Standard.—That it makes a good standard.

Town.—That it is one of the best Roses for growing in a town or suburban garden.

Wall.—That it is suitable for training up the face of a wall or the side of a house.

Weeping.—That it makes an excellent weeping standard.

6.—Summer-flowering Roses.—The letter “S” at the end of the description is used to indicate those Roses which flower only once in the year, even though flowering late.

7.—Climbing Sports from Dwarf Roses:

These climbing sports are not always dependable, as one plant of the same variety will make strong climbing shoots, while another will revert in growth to the variety from which it sported. The most reliable of those mentioned in the Catalogue are Climbing K. A. Victoria, Climbing Mrs. W. J. Grant, and Climbing Caroline Testout.
